

Name: Amal Thundiyil

Department: IT

Batch: D

UID: 2020400066

Aim: Implement Insertion and selection sort both. Show all intermediate passes and give analysis in terms of no of Comparisons and Exchanges

Program:

```
#include <stdio.h>
```

```
void display(int arr[], int n) {  
    printf("Array is: ");  
    for (int i = 0; i < n; i++) {  
        printf("%d ", arr[i]);  
    }  
    printf("\n");  
}
```

```
void insertion_sort(int arr[], int n) {  
    int comparisons = 0, swaps = 0;  
    for (int i = 1; i < n; i++) {  
        int key = arr[i];  
        int j = i - 1;  
        while (j >= 0) {  
            comparisons += 1;  
            if (arr[j] > key) {  
                arr[j + 1] = arr[j];  
                j -= 1;  
                swaps += 1;  
            } else  
                break;  
        }  
        arr[j + 1] = key;  
        display(arr, n);  
        printf("Comparisons: %d\n", comparisons);  
        printf("Swaps: %d\n", swaps);  
    }  
}
```

```
void selection_sort(int arr[], int n) {  
    int comparisons = 0, swaps = 0;  
    for (int i = 0; i < n; i++) {
```

```

        int min_index = i;
        for (int j = i + 1; j < n; j++) {
            comparisons += 1;
            if (arr[min_index] > arr[j]) {
                min_index = j;
            }
        }
        swaps += 1;
        int temp = arr[i];
        arr[i] = arr[min_index];
        arr[min_index] = temp;
        display(arr, n);
        printf("Comparisons: %d\n", comparisons);
        printf("Swaps: %d\n", swaps);
    }
}

```

```

void main() {
    int n;
    printf("Enter the size of array: ");
    scanf("%d", &n);
    int arr1[n], arr2[n];
    printf("Enter the elements of the array: ");
    for (int i = 0; i < n; i++) {
        scanf("%d", &arr1[i]);
        arr2[i] = arr1[i];
    }
    printf("\nInsertion Sort: \n");
    insertion_sort(arr1, n);
    display(arr1, n);
    printf("\nSelection Sort: \n");
    selection_sort(arr2, n);
    display(arr2, n);
}

```

Output:

Best Case:

```
Enter the size of array: 4
Enter the elements of the array: 1 2 3 4

Insertion Sort:
Array is: 1 2 3 4
Comparisons: 1
Swaps: 0
Array is: 1 2 3 4
Comparisons: 2
Swaps: 0
Array is: 1 2 3 4
Comparisons: 3
Swaps: 0
Array is: 1 2 3 4

Selection Sort:
Array is: 1 2 3 4
Comparisons: 3
Swaps: 1
Array is: 1 2 3 4
Comparisons: 5
Swaps: 2
Array is: 1 2 3 4
Comparisons: 6
Swaps: 3
Array is: 1 2 3 4
Comparisons: 6
Swaps: 4
Array is: 1 2 3 4
```

The number of swaps is 0 for insertion sort in the best case. The number of comparisons is 3.
The number of swaps is 4 for selection sort in the best case. The number of comparisons is 6.

Worst Case:

```
Enter the size of array: 4
Enter the elements of the array: 4 3 2 1

Insertion Sort:
Array is: 3 4 2 1
Comparisons: 1
Swaps: 1
Array is: 2 3 4 1
Comparisons: 3
Swaps: 3
Array is: 1 2 3 4
Comparisons: 6
Swaps: 6
Array is: 1 2 3 4

Selection Sort:
Array is: 1 3 2 4
Comparisons: 3
Swaps: 1
Array is: 1 2 3 4
Comparisons: 5
Swaps: 2
Array is: 1 2 3 4
Comparisons: 6
Swaps: 3
Array is: 1 2 3 4
Comparisons: 6
Swaps: 4
Array is: 1 2 3 4
```

The number of swaps is 6 for insertion sort in the worst case. The number of comparisons is 6.

The number of swaps is 4 for selection sort in the worst case. The number of comparisons is 6.

Random Array Case:

```
Enter the size of array: 4
Enter the elements of the array: 4 2 1 3

Insertion Sort:
Array is: 2 4 1 3
Comparisons: 1
Swaps: 1
Array is: 1 2 4 3
Comparisons: 3
Swaps: 3
Array is: 1 2 3 4
Comparisons: 5
Swaps: 4
Array is: 1 2 3 4

Selection Sort:
Array is: 1 2 4 3
Comparisons: 3
Swaps: 1
Array is: 1 2 4 3
Comparisons: 5
Swaps: 2
Array is: 1 2 3 4
Comparisons: 6
Swaps: 3
Array is: 1 2 3 4
Comparisons: 6
Swaps: 4
Array is: 1 2 3 4
```

The number of swaps is 4 for insertion sort in the random array case. The number of comparisons is 5.

The number of swaps is 4 for selection sort in the random array case. The number of comparisons is 6.
